The issuer believes that, at the time of its issuance and based on transparency data made publicly available by the issuer, these covered bands would satisfy the eligibility criteria for Article 129(7) of the Capital Requirements Regulation (EU) 575/2013. It should be noted, however, that

whether or not exposures in the form of covered bonds are eligible to preferential treatment under Regulation (EU) 575/2013 is ultimately a matter to be determined by a relevant investor institution and its relevant supervisory authority and the issuer does not accept any responsibility in this regard.

Notes

¹ Soft Bullet Date (Extended Maturity)

If the covered bonds are not redeemed on the relevant maturity date, the maturity will automatically be extended on a monthly basis up to one year. In that event, the covered bonds can be redeemed in whole or in part on a monthly basis up to and including the Extended Maturity Date.

² Other Assets

In addition to the mortgage assets, other assets (or substitution assets) may be included in the cover pool up to an amount equal to 20% of the cover pool, subject to the following eligibility criteria:

- Deposit with the Bank of Portugal in cash or ECB eligible securities, or
- Deposits held with credit institutions rated at least A-.

³ Overcollateralisation

The overcollateralisation ratios are calculated by dividing (i) the total outstanding balance of the assets included in the cover pool by (ii) the total nominal amount of the covered bonds (both excluding accrued interest). For clarification purposes, all assets included in the covered pool are eligible assets.

⁴ Net Present Value (NPV)

The NPV of the assets is obtained by discounting all future cash flows with the IRS curve.

The NPV of the liabilities is obtained by discounting all future cash flows with the IRS curve.

Substitution assets as well as any derivatives in the pool are marked at their market value.

NPV of liabilities cannot exceed the NPV of the portfolio assigned to the bond, including derivatives.

⁵ Loan-to-Value

The Current LTV is calculated by dividing de outstanding balance of the loan by the value of the underlying property (last physical valuation).

The Current indexed LTV is calculated by dividing de outstanding balance of the loan by the latest valuation amount of the underlying property (i.e. indexed value or last physical valuation).

A full valuation of the underlying properties must have been performed by an independent appraiser, at origination or after, prior to the inclusion of the mortgage loan in the cover pool.

Properties (both residential and commercial) should also be revalued regularly:

- For commercial assets this must be done on an annual basis;
- Residential properties must be revalued at least every 3 years if the individual mortgage credit value exceeds € 500.000
- -Also the value of the mortgage property should be checked on a frequent basis, at least every three years, in order to identify the properties that require appraisal by an expert (this procedure can be done using satisitcal models approved by the Bank of Portugal).

⁶ Insured Property

All mortgages must have property damage insurance covering fire and floods.

⁷ Delinquencies

A loan is considered to be delinquent if any payment is in arrears by more than 30 days. According to the Portuguese covered bonds legislation, any loan which is in arrears by more than 90 days must be removed from the pool and substituted by another loan which fulfills the elegibility criteria. Therefore, there are no NPL's included in the cover pool.
