9. Securitisation operations

9.1. Description of the activities and operations

On 31 December 2020, the Group had five ongoing credit securitisation transactions originated by the operation in Portugal. Three are traditional securitisation transactions (Magellan n^{o} 1, 3 and 4) and the other two are synthetic securitisation transactions (Caravela SME 3 and 4).

Since 1998, the Group has carried out securitisation transactions supported on portfolios of different types of assets and pursuing different goals, based on market conditions and opportunities and on the Group's interests and needs at each moment.

It should be noted that, until 2007, all the transactions made were placed in the market with institutional investors. Taking advantage of the conditions of a favourable market framework. This group of transactions - involving mortgage loans, car loans, consumer loans and companies' loans – was carried out with the purpose of supplementing the financing of the Group's business and, under certain circumstances, to promote a more efficient management of the Bank's balance sheet, particularly its equity. The type of investors that participated in these transactions has revealed to be diverse and complementary to the base of investors resulting from the Bank's direct funding transactions in the capital markets. In December 2019, three of these transactions were still outstanding.

After 2007 and until 2012, market conditions to place this kind of transactions deteriorated significantly or even ceased to exist during a long time period, and so it was impossible to set up new securitisations. Consequently, the Bank began retaining in its books the totality of the bonds issued within the scope of each credit securitisation transaction (from the senior tranche to the first loss tranche). To maximise liquidity, the Bank used the senior tranche of each transaction as eligible collateral under refinancing transactions with the Eurosystem. Securitisations carried out in this context were fully redeemed as the Bank's liquidity position improved. In December 2019, the Bank held in its portfolio only portions of little relevance of market transactions, which were placed on the market and were still underway.

Taking advantage of improved market conditions and in particular the appetite for risk originated in Portugal, the Bank carried out, in 2013 and 2014, two synthetic securitisations, which embodied the hedge of a significant portion of its short, medium and long-term corporate loan portfolio (Caravela SME No. 3) and of its leasing portfolio (Caravela SME No. 4). These transactions were aimed at achieving an effective transfer of risk to specialised institutional investors, resulting in a reduction of the risk weighted assets associated with those portfolios.

As an investor, the Group does not hold, and given its profile and investment policy is not expected to hold, any significant position in securitisation transactions. In any case, pursuant to article 449 f), the Bank has a broad risk management and controlling operation, based on models established across a wide range of credit products, including monitoring credit and market risks of securitisation positions.

In this context and being a Bank with IRB methodology approved by the regulator for securitisation positions, the provisions of Part III, Title II, Chapter 5 are observed, with emphasis on the risk weights resulting from articles 261 and 262 of the CRR, thus sustaining an adequate level of own funds. On the other hand, the book value reflects at each moment the market risk component of the security, allowing an adequate assessment of the risk return profile of the underlying asset. Any changes in the risk of these positions are thus subject to rigorous monitoring with reflection not only on the level of own funds but also on the Bank's results. Such changes are also considered and monitored under stress testing scenarios.

Currently, under the terms of article 449 (g) of the CRR, given the low materiality of risks involved, there is no specific hedging or personal protection transaction to reduce the risk of securitization positions held. The specific need for hedging will always depend on the level of risk and of the amounts involved, as this analysis and follow-up is carried out on a case-by-case basis. The same would apply to eventual re-securitisation transactions (which were not held by the Bank at 31/12/2020 or 31/12/2019).

It should also be referred that the entity of the Group that acts as Originator (BCP, in all the active transactions) also intervenes as Servicer and, usually, as Transaction Manager.

The main features of the securitisation transactions of assets originated by the Group, namely in terms of its goal, form and level of involvement, the existence or not of a significant risk transfer in each transaction and of the securitised values and in debt, for active transactions as at 31 December 2020, are summarised in the next table:

TABLE 68 – DESCRIPTION OF SECURITISATION OPERATIONS

	MAGELLAN No. 1				
Identification of the securitisation operation	Magellan Mortgages No. 1 Limited				
Initial objective of the securitisation operation	Securing funding and risk management				
Form of the securitisation operation	Traditional securitisation				
	Credit lender				
	Manager of the assigned credits				
	Escrow bank of the Securitisation Credit Fund				
	Transaction Manager				
Start date	18 December 2001				
Legal maturity	15 December 2036				
Step-up clause (date)	15 December 2008				
Revolving (years)	N.A				
Securitised assets (in million euros)	1,000.0				
Significant credit risk transfer ⁽¹⁾	No				

	MAGELLAN No. 3			
Identification of the securitisation operation	Magellan Mortgages No. 3 Limited			
Initial objective of the securitisation operation	Securing funding and risk management (2)			
Form of the securitisation operation	Traditional securitisation

9.2. Group accounting policies

The Group fully consolidates Special Purpose Entities (SPE) resulting from securitisation operations originated in Group entities and resulting from credit assignments operations, when the relation with such entities indicates that the Group controls their activities, regardless of the shareholding owned by it. Besides these SPE resulting from securitisation operations and from credit assignments operations, no additional SPE's have been consolidated considering that they do not meet the criteria established on SIC 12 as described below.

The assessment of the existence of control is made based on the criteria defined by SIC 12, analysed as follows:

- The SPE's activities are being mainly carried out in favour of the Group, according to its specific business needs, so that the Group benefits from the operation of the SPE;
- The Group has the power to decide to obtain most of the benefits of the SPE's activities, or, by establishing autopilot mechanisms, the entity delegated such decision-making powers;
- The Group has the right to obtain most of the benefits of the SPE's activities and is therefore exposed to the SPE's underlying risks;
- The Group holds most residual or property risks of the SPE or its assets, so as to benefit from its activities.

To determine if an SPE is controlled, it is assessed if the Group is exposed to the risks and benefits of the activities of the SPE and if it has the decision-making powers in that SPE. The decision on whether an SPE must be consolidated by the Group requires the use of premises and estimates to verify the residual gains and losses and determine who holds most of those gains and losses. Other assumptions and estimates could result in differences in the consolidation perimeter of the Group, with a direct impact on results.

Within the scope of the application of such policy, the accounting consolidation perimeter included the SPE resulting from the traditional securitisation operation Magellan no. 3. On the other hand, the Group did not consolidate into its accounts the SPEs that also resulted from the traditional securitisation operations Magellan no. 1 and 4.

Regarding these SPE, not recognised in the balance sheet, it was verified that the associated risks and benefits were substantially transferred, since the Group does not hold securities issued by the SPE in question with exposure to most residual risks, nor is it in any other manner exposed to the performance of the credit portfolios.

The Group has two operations in progress which form structures of synthetic securitization. Caravela SME No. 3, associated to a corporate loan portfolio, mostly small and medium sized enterprises (SMEs) or individual entrepreneurs and Caravela SME No. 4, which involves a pool of leasing contracts to companies and sole partnerships.

In both operations, the Bank hired a Credit Default Swap (CDS) with a SPV, buying by this way the protection for the total portfolio referred. Both cases, the synthetic securitizations, the same CDS, the risk of the respective portfolios were divided in 3 classes: senior, mezzanine and equity. The mezzanine and part of the equity (20%) were placed in the market through an SPV, and the subscription by investors, the Credit Linked Notes (CLSs). The Bank retained the senior risk and part of the equity remaining (80%). The product of the CLNs issue was invested by the SPV in a deposit which total collateral the responsibilities in the presence of the Bank, in accordance of the CDS.

Regarding the Magellan No.3 included in the consolidation perimeter, if it is determined that the control exercised by the Group over their activities has ceased, namely pursuant to the sale of the most subordinated securities issued by them, the SPE will no longer be consolidated. In this case, since the law determines that the management of loans granted remains within the group, their registry in the off-balance sheet will be maintained.

At the moment of the assignment of the assets associated with securitisation operations, the Group registers a gain or a loss in the income statement if the SPE is not consolidated from the beginning, corresponding to the difference between the sale value of the assets and their accounting value. In the other cases, if the SPE is consolidated, there are no gains or losses in the initial moment.

If while an operation is active, whose SPE is consolidated, the Group sells part or all the securities held, it will register a gain or loss that: (i) if the need to consolidate the SPE remains, it will be associated with the sale of the securities issued, being incorporated in liabilities as a premium or discount and accrued according to the effective rate until maturity or, (ii) if the SPE is not consolidated with due grounds, will result from the sale of the assets, which will be derecognised, and the sale will be recognised in the consolidated income statements.

9.3. Own funds requirements

On 31 December 2020 and 2019, the Group held securitisation positions both as an investor and as an originator entity. For some of the securitisation positions as an originator there was no significant credit risk transfer, according to the criteria defined in the CRR, articles 243 and 244, Section 2, Chapter 5, Title II, Part III and, therefore, the own funds requirements were determined as if these securitisations had not occurred.

The computation of the own fund's requirements of the securitisation operations by the end of 2020 and 2019 was made according to Section 3, Chapter 5, Title II, Part III of the CRR. For 2020, the changes to the established in this Section 3 resulting from Regulation (EU) 2017/2401 of the European Parliament and of the Council of 12 December 2017 were considered.

For the securitisation positions held as an investor, with an external rating attributed by an ECAI, a ratings-based method was used, in accordance to article 261, Sub-Section 4, Section 3, Chapter 5, Title II, Part III of the CRR and using the mapping between external ratings and credit quality grades that is defined in prudential regulations and Guidelines. The exposures without external rating were subject to a 1,250% weight.

The ECAI used in 2020 to compute the own funds requirements for securitisation operations were Standard & Poor's, Moody's and Fitch Ratings.

For the positions held as an originator entity, the Supervisory Formula Method was used, in accordance with the CRR, article 262, Subsection 4, Section 3, Chapter 5, Title II, Part III (in the case of the year 2020 according to the amendments defined by Regulation (EU) 2017/2401).

The risk weighted assets for securitisation operations computed according to the IRB approach, at the end of 2020 and 2019, are shown in Tables 70 and 71.

TABLE 70 - SECURITISATION OPERATIONS: IRB APPROACH (TRADITIONAL)
